Profile

Software Developer with hands-on experience building full-stack and AI-powered applications using **Java, Spring Boot, React, Python, and PostgreSQL**. Skilled in **object-oriented programming, Agile development, and test-driven practices**. Adept at developing Android applications in Kotlin and integrating REST APIs. Passionate about writing clean, efficient code and deploying scalable solutions. Particularly interested in building scalable systems, API integrations, and workflow automation tools in fast-paced environments.

Technical Skills

Languages: Python, Java, Kotlin, JavaScript, HTML/CSS, SQL

Frameworks/Tools: React, Node.js, Spring Boot, NPM, Vite

Technologies: REST APIs, PostgreSQL, Git, Postman, OpenAI API, Vercel

Core Competencies: Full-Stack Development, API Integration, TDD, Agile, Version Control

Certifications: FinOps

Projects

CRM Integration Platform | *React, Node.js, PostgreSQL, Vite, REST APIs, Webhooks, OpenAI API* [ONGOING]

- Developing full-stack CRM platform to manage customer data, job scheduling, and field operations workflows.
- Designing RESTful APIs and integration workflows to simulate enterprise CRM systems and external service communication.
- Building a simulated Salesforce integration layer, enabling real-time data synchronisation between distributed systems.
- Implementing webhook-based event handling to process external updates and maintain data consistency across services.
- Exploring AI-driven workflow automation using the OpenAI API to enhance operational efficiency and user experience.

CVstitch – AI-Powered CV Tailoring Tool | *React, Python, Vite, OpenAI API, REST APIs* [March 2026]

- Developed full-stack AI web application that dynamically tailors CVs to job descriptions using NLP techniques.
- Built React frontend and Python backend communicating via structured JSON APIs.
- Integrated OpenAI API for intelligent CV rewriting and keyword optimisation.
- Deployed application via Vercel with secure environment configuration.

Fi-ness – Android-Based Fitness Tracking Application | *Kotlin, XML, Android Studio, Nutritionix API* [April 2025]

- Developed Android fitness app with custom BMI calculation using a proprietary formula for more accurate health metrics.
- Implemented backend logic in Kotlin and designed UI with XML, following Material Design principles.
- Integrated Nutritionix API to enable real-time calorie tracking and nutritional analysis of logged food consumption.

Asset Management System | *React, Spring Boot, Java, PostgreSQL* [March 2024]

- Designed full-stack digital asset management platform with React frontend and Spring Boot backend.
- Implemented PostgreSQL relational database schema for asset and user management.
- Applied Test-Driven Development (TDD) methodology to ensure reliability and maintainability.

Experience

Wepply

January - March 2026

Software Development Team Lead & Intern

Remote

- Developed and optimised frontend components according to UX/UI designs, improving usability and user engagement.
- Implemented AI features using Python and integrated them with the web application within an Agile environment.
- Collaborated with cross-functional teams to enhance UI functionality, and streamlined workflows.
- Performed debugging, testing, and performance optimisation to ensure application scalability and reliability.
- Participated in code reviews and version control management using Git, fostering team best practices.

Tesco PLC

June 2023 – Present

Colleague & Retail Assistant

Chelmsford, Essex

- Assisted customers with product selection, checkout, and inquiries, maintaining high satisfaction through personalised service.
- Processed POS transactions accurately while following cash handling and financial security protocols.

Education

Royal Holloway, University of London

Sept 2022 – July 2025

Bachelor of Science in Computer Science (Software Engineering)

Egham, Surrey
